Supplemental Table

Table S1: Baseline and Peri-Operative Characteristics Among Patients Who Developed SSI

	N (%)
Development of SSI post-op, *yes*	2 (1.8)
Age in years, Median (IQR)	
Race/Ethnicity	
Hispanic	2 (100)
Indication for Adnexal	
Torsion	1 (50.0)
Cyst	1 (50.0)
Wound classification designated	
Clean (1)	2 (100.0)
Actual wound classification	
Clean (1)	2 (100.0)
Type of antibiotics administered pre-op	
Ancef	1 (100.0)
Duration of antibiotics administered pre-op in days, Median (IQR)	0.0 (0.0–0.0)
Specimen removed, *yes*	2 (100.0)
Type of Specimen Removed	
Other	1 (50.0)
Cyst & Other	1 (50.0)
Surgical approach	
Laparoscopic	2 (100.0)
Skin prep used at time of surgery	
Chloraprep	2 (100.0)
Type of antibiotics administered post-op	
Clindamycin	1 (100.0)
Duration of antibiotics administered post-op in days, Median (IQR)	3.5 (0.0-7.0)
N=2. The total count may not add to 2 due to missing data
